

IOT ASSIGNMENT-2

Build a python code, assume you get temperature and humidity values(generated with random function to a variable) and write a condition to continuously detected alarm in case of high temperature

Code:

```
Import random
```

```
Temperature = random.randint(0,200)
```

```
humidity = random.randint(0,100)
```

```
print("The recorded temperature in Fahrenheit= ",temperature)
```

```
print("The recorded humidity in percentage= ",humidity)
```

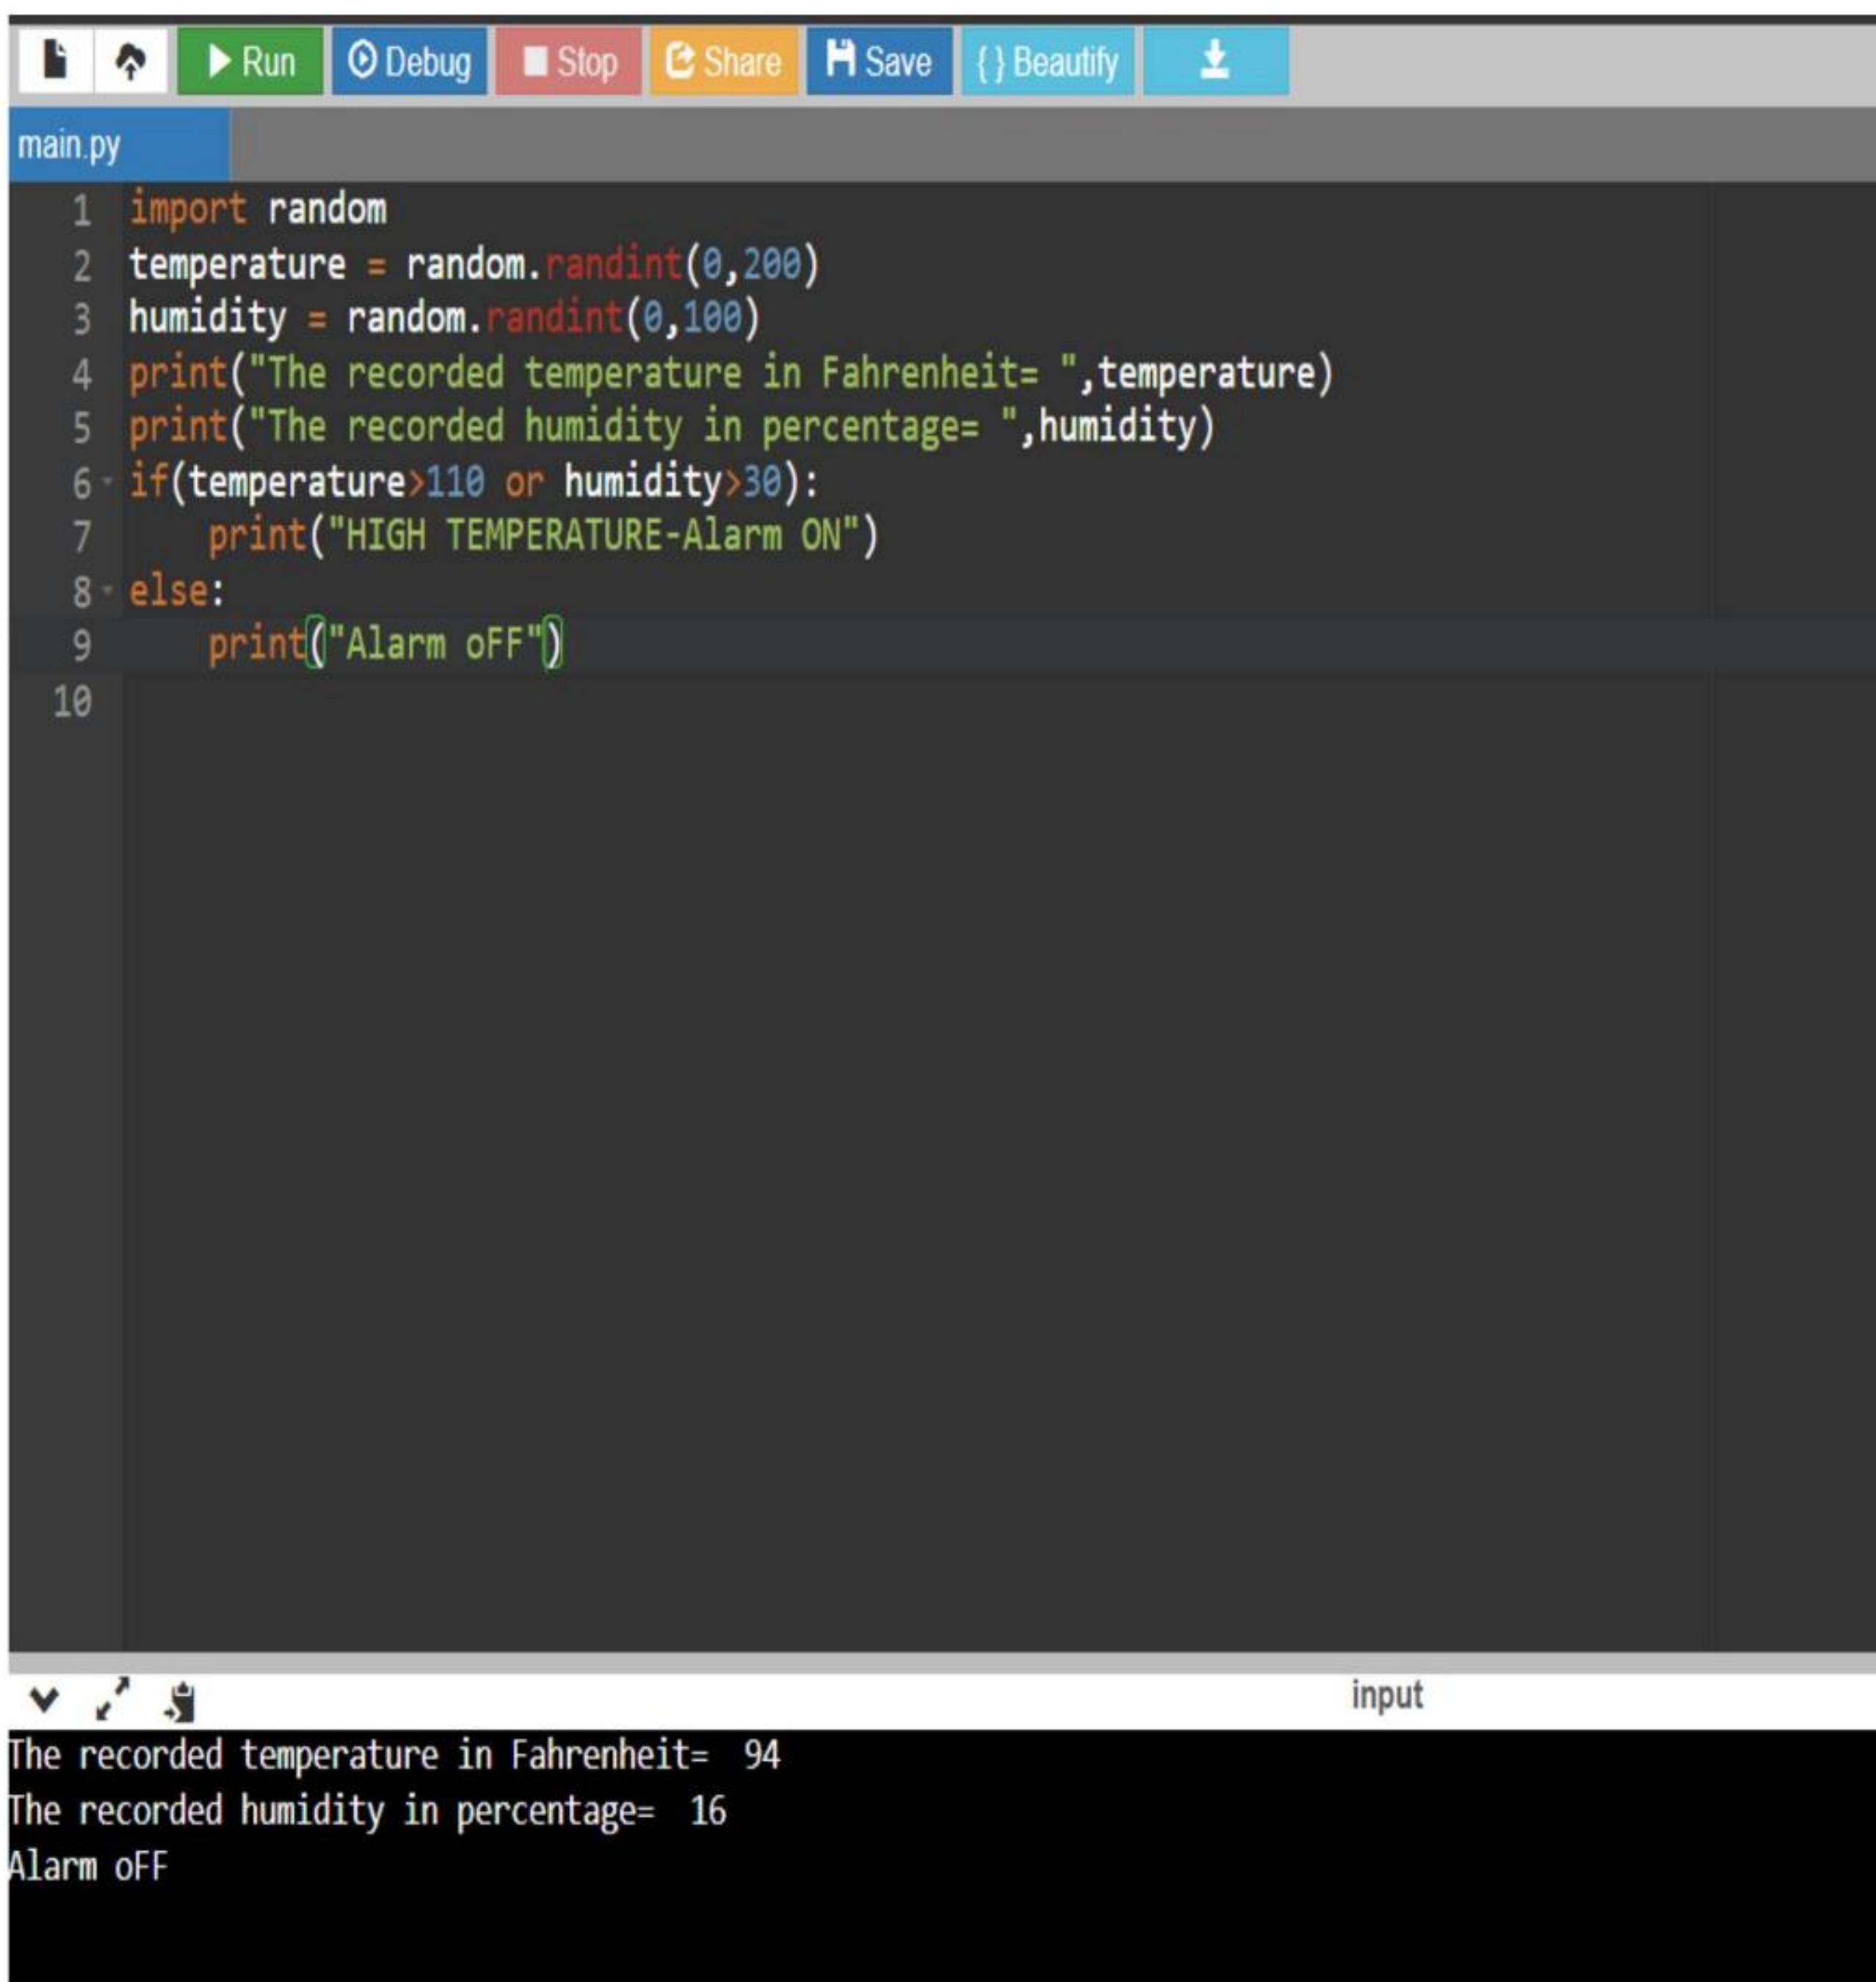

```
if(temperature>110 or humidity>30):
```

```
    print("HIGH TEMPERATURE-Alarm ON")
```

```
else:
```

```
    print("Alarm oFF")
```

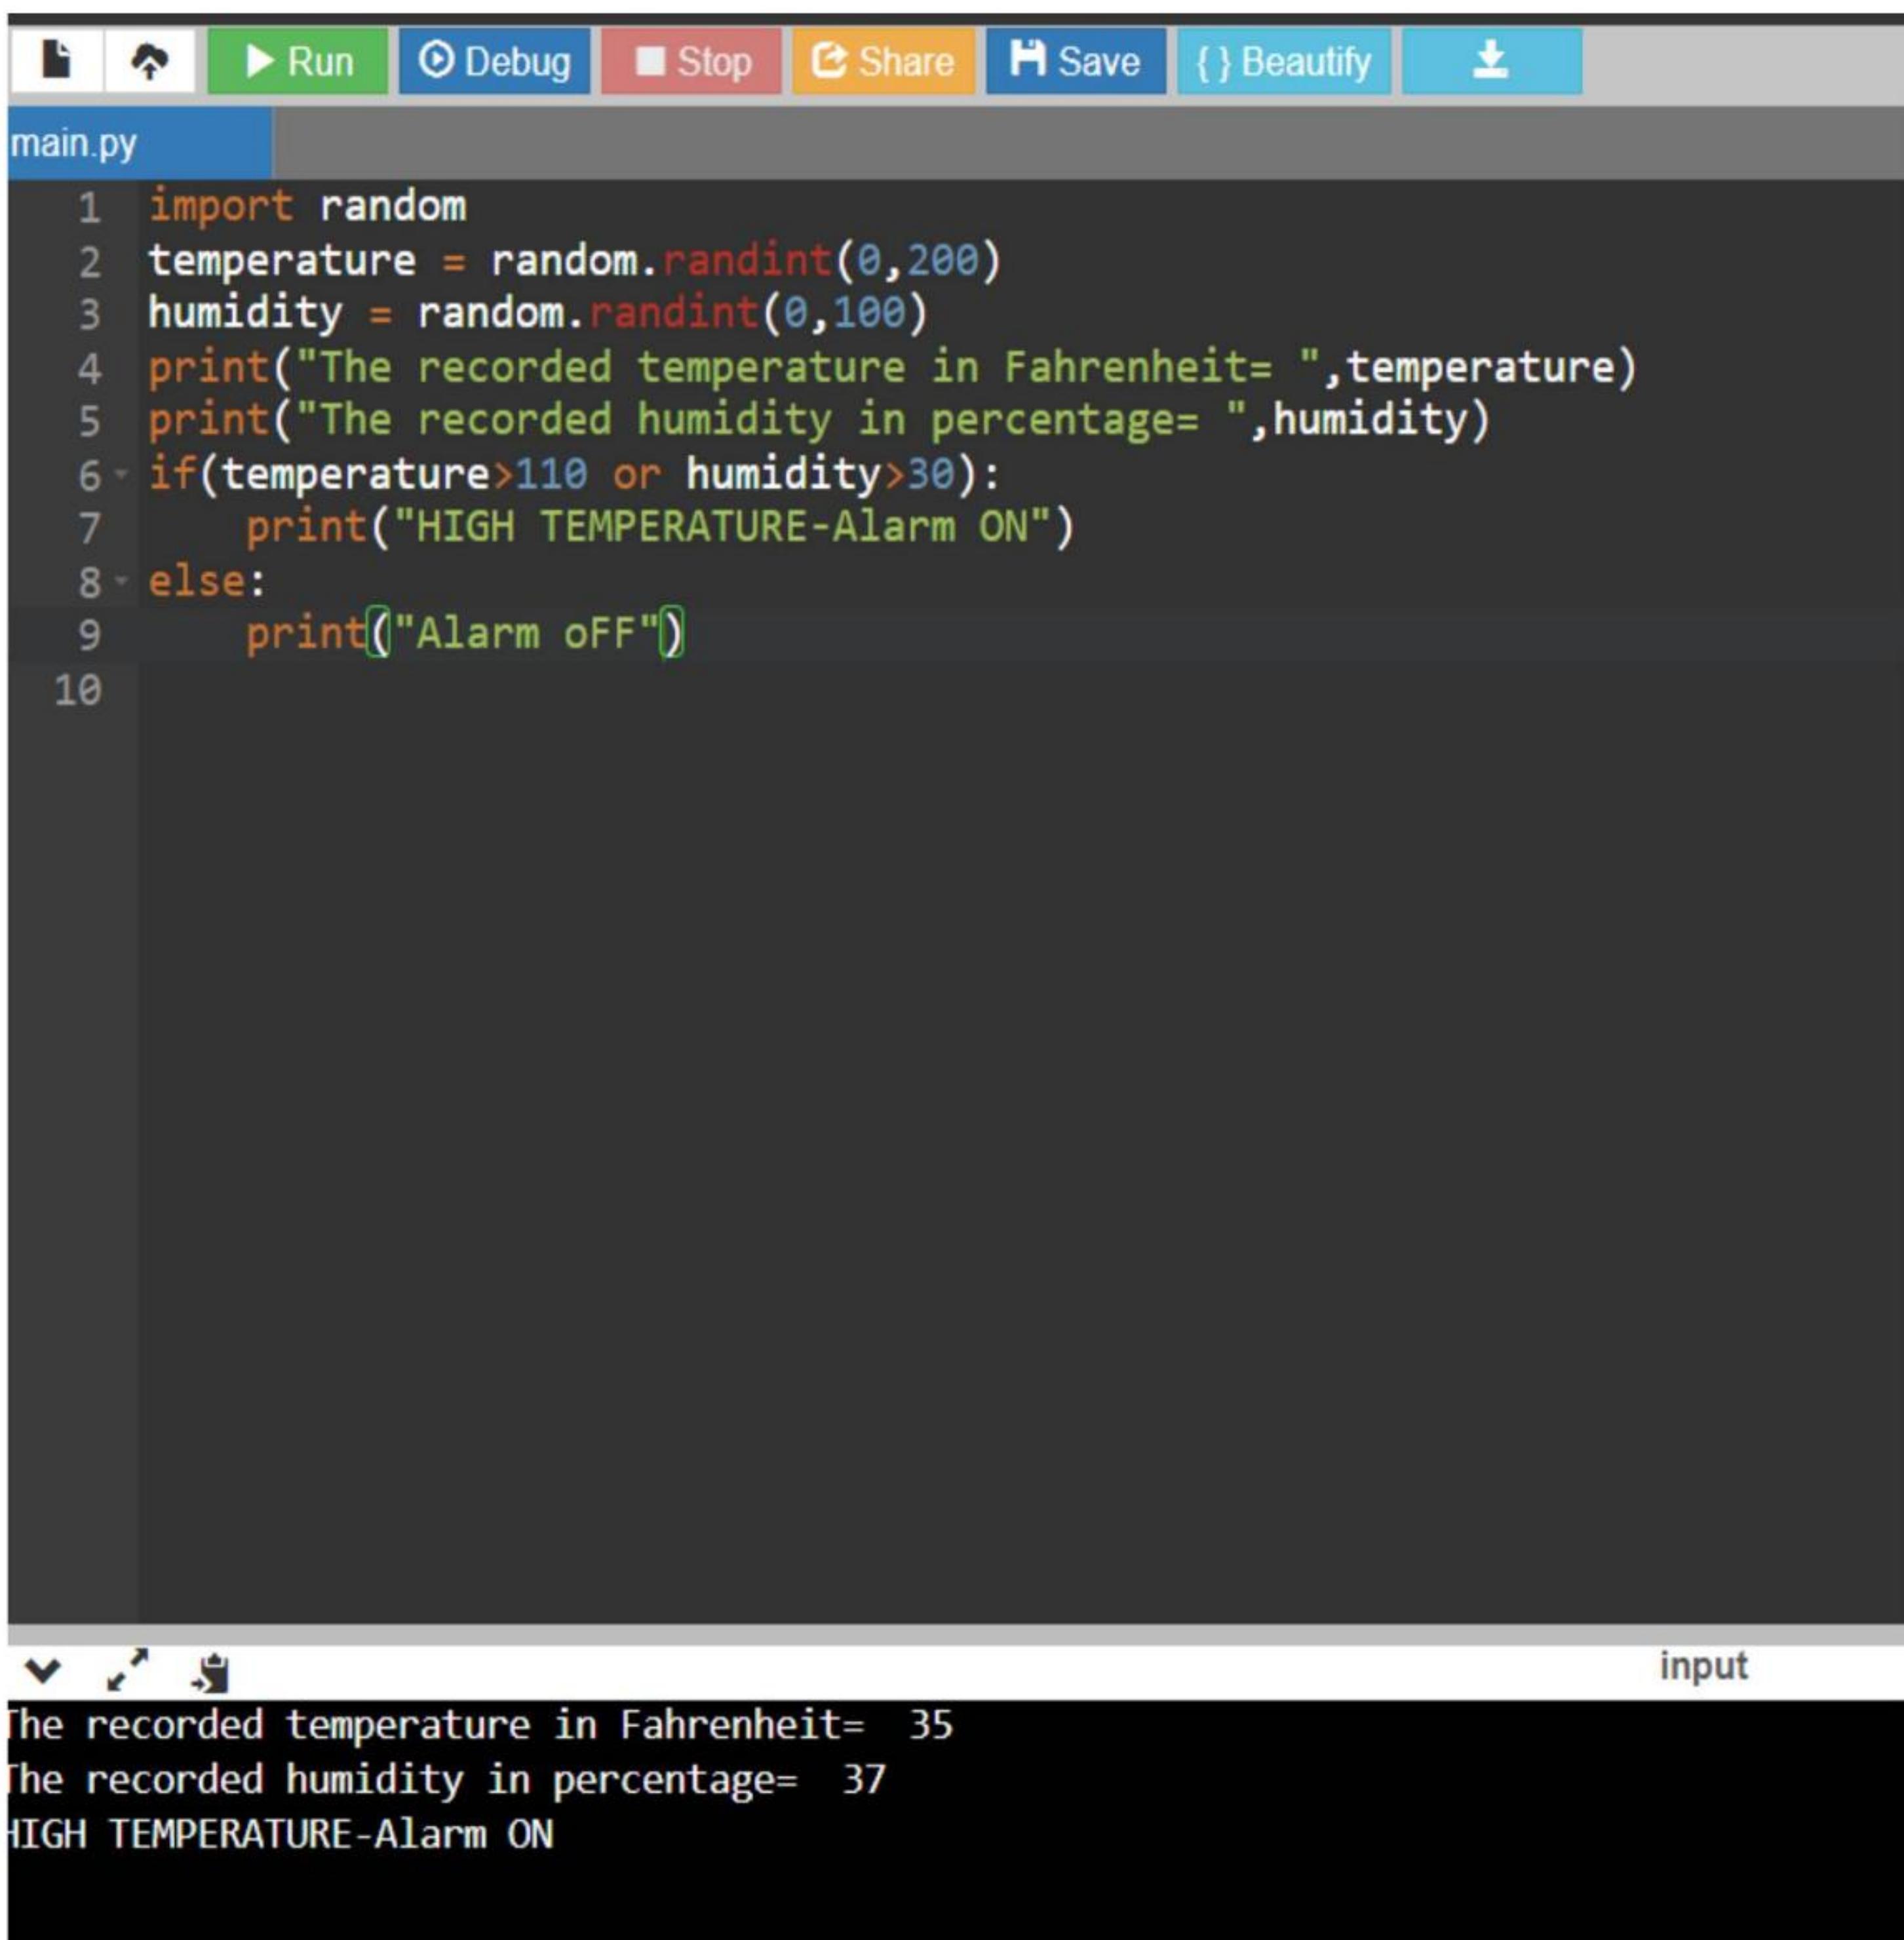

output:CASE 1: ALRAM-OFF

```
main.py
1 import random
2 temperature = random.randint(0,200)
3 humidity = random.randint(0,100)
4 print("The recorded temperature in Fahrenheit= ",temperature)
5 print("The recorded humidity in percentage= ",humidity)
6 if(temperature>110 or humidity>30):
7     print("HIGH TEMPERATURE-Alarm ON")
8 else:
9     print("Alarm OFF")
10
```

The recorded temperature in Fahrenheit= 94
The recorded humidity in percentage= 16
Alarm OFF

CASE 2: ALRAM-ON

```
main.py
1 import random
2 temperature = random.randint(0,200)
3 humidity = random.randint(0,100)
4 print("The recorded temperature in Fahrenheit= ",temperature)
5 print("The recorded humidity in percentage= ",humidity)
6 if(temperature>110 or humidity>30):
7     print("HIGH TEMPERATURE-Alarm ON")
8 else:
9     print("Alarm oFF")
10
```

The recorded temperature in Fahrenheit= 35
The recorded humidity in percentage= 37
HIGH TEMPERATURE-Alarm ON
